Burndown Chart

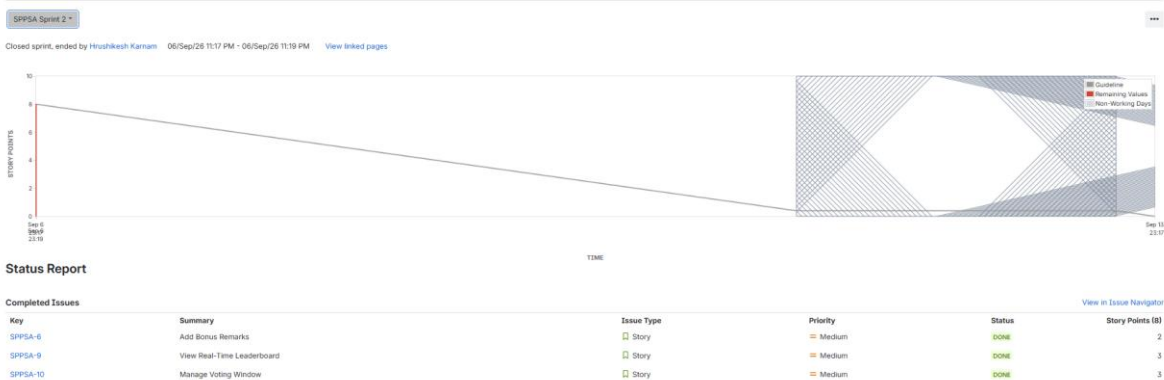

[How to read this chart](#)

How to read this chart

Track the total work remaining and project the likelihood of achieving the sprint goal. This helps your team manage its progress and respond accordingly.

5) SPRINT REPORT

1. Did your estimations reflect the actual effort?

Yes, the estimations were fairly close to the actual effort. We assigned story points based on the complexity of each task, and all the planned stories for both sprints were completed. So overall, the estimates worked well for our sprint planning.

2. Was your backlog well-prioritized?

Yes, I feel the backlog was properly prioritized. We kept the main features like creating the showcase profile, submitting the project, judging, and voting at high priority, while features like the leaderboard, voting window, and bonus remarks were given medium priority. This helped us decide which work to take up first.

3. How did your simulated sprint align with your plan?

The simulated sprint followed our plan quite well. We selected the important stories for Sprint 1, moved them from To Do to In Progress and then to Done, and completed the remaining stories in Sprint 2. Since this was a simulation, the progress happened quickly, but the planned work was completed in the intended order.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that we were able to complete all the planned story points in the sprint. The remaining work reduced from 18 points to 0 in Sprint 1, which showed that the amount of work we planned was manageable for the team. It also helped us see how quickly the work was being completed.
